Education

- B.S. in Computer Science from North Carolina State University Graduating 2028
- Associate's in science from Forsyth Tech Community College Graduated 2025

Projects

Notarik (RSVP Reader)

- Built a RSVP reading engine with Swift, SwiftUI, CoreData and Apple's Natural Language Framework to allow users to submit PDFs and have them displayed via the RSVP reading technique.
- Used Apple's Natural Language Framework (NLTokenizer/NLTagger) for sentence and word detection.
- Used CoreData for local data persistence and CloudKit features for multi-device sync.

Personal Portfolio Website

- Built a quick statically generated site on Astro using HTML, JavaScript, and Tailwind CSS. I chose Astro its fast load times, zero JavaScript by default, and good SEO.
- Configured CI/CD deployment to Cloudflare via Wrangler. Custom domain and email routing are also utilized.
- Integrated the Github API to dynamically retrieve public repository information to display on my website (JSON structured data).

Group To-do List App

- Built a shared to-do list app enabling multiple users to create and manage tasks in real time.
- Written in Swift and SwiftUI, using CloudKit data persistence for multi device sync and multi-user sharing.

Work History

Online Grocery Pickup at Walmart

Sept. 2024 – April 2026

- Collaborated with team members and supervisors to stage, transfer, and dispense online orders within strict time constraints.
- Communicated with supervisors regularly to resolve order discrepancies and resolve customer concerns swiftly.
- Maintained cold chain compliance for perishable goods ensuring food safety.

Server at Bad Daddy's Burger Bar

May 2026 – Aug. 2026

- Managed multiple tables simultaneously, took orders, resolved conflicts, and processed payments via POS.
- Collaborated with kitchen and bar staff to maintain accurate orders, accurate food quality, and avoiding service-related problems.
